Antimikrob

DESCRIPTION

Antimikrob stops growth of bacteria, algae and slime in fuel tanks. It has a longlasting effect and is biodegradable. Reduces problems associated with microbial communities in fuels, plugged filters and cloudy fuel. The treatment is very effective and gives results after a short period of time.

APPLICATION

Drain away any water from the fuel tank. Add the biocide when the tank is 3/4 full. When slime is visible in the tank, or filters are plugged, the quantity applied can be increased significantly for a short period.

RECOMMENDATIONS

1. Shock dosing in acute disruption:
200 ml are sufficient for 200 liters of fuel – 1 bottle/200 lit
2. Continuous treatment/prevention:
200 ml is enough for 1000 liters of fuel – 1 bottle/1000 lit
